IEC Mode Measurement System Characteristics

	Sample Rate	Window Width	Acquisition Overlap
50 Hz Operation			
Rectangular measurement window	12.8 kHz	16 cycles	None
Hanning measurement window	8.533 kHz	24 cycles	50%
50 Hz Operation			
Rectangular measurement window	15.360 kHz	16 cycles	None
Hanning measurement window	7.680 kHz	24 cycles	50%

Notes:

- It is possible to program the output frequency of the 6812B and 6813B from dc to 45 Hz (please see note 3).
- Full current is available at voltages between 50% and 100% of the output voltage range.
- Product may be operated between dc and 45 Hz subject to the following conditions:
Measurements may be extended to 4.5 Hz at full accuracy only by selecting a digitization rate of 250 μ seconds per point
Frequency content of the measured signal must be limited to 4 k Hz or less to avoid aliasing effects
- Select low measurement range for improved accuracy (10:1) for lower power measurements.
- Single-phase operation.
- Output voltage harmonic content specification is limited for the 6843A for half-wave rectified/Class C loads. Compliance will be tested, verified and reported by the RTS software for all Devices Under Test

ac Power Solutions (cont'd)
