HP 5087A

HP 5087A Distribution Amplifier

The HP 5087A distribution amplifier provides the flexibility needed for distribution of frequency standard outputs, where multiple-output frequencies are required. The modular construction allows you to configure the product for a variety of distribution needs.

Several configurations are available, and special combinations of input and output modules can be supplied. Amplifiers can be added or the configuration easily changed with the HP 10812A options.

HP E1750A

HP E1752A

HP E1750A VXI Distribution Amplifier

These VXI distribution amplifier modules buffer and distribute standard clock and other signals in laboratory, factory, and general ATE environments. They feature one input and six outputs per module, and are suited to distributing a wide variety of signals in a single ATE system or throughout a building. Principal features of the product include:

- Broadband sine wave or pulse buffering/distribution
- Built-in AGC for no level adjustments
- Preservation of input phase and frequency characteristics with changing environment (temperature, humidity, etc.)
